

ATTENTION

MIAMI-DADE COUNTY BUILDING DEPARTMENT PATRONS

In an effort to streamline the inspection process, effective March 16, 2009, the following inspection procedures will become effective:

Building Permits

In lieu of requesting an insulation inspection (inspection request code "071"), at the time of final inspection the permit holder will be required to submit an executed Energy, Sound and Impact Certificate (blank form available at www.miamidade.gov/building/form-checklist) to show compliance with the insulation requirements of the Florida Building Code.

Plumbing Permits

The top out and water pipe inspections will be combined (former inspection request codes "016" and "017" respectively) and must be requested as a rough inspection, request code "002". Therefore, as of the effective date inspection request codes "016" and "017" will no longer be available.

The inspection of the water service will be performed at the same time as the sewer and relay and must be requested as "Sewer and Relay/Water Service", inspection request code "018".

Partial inspections, if required, will be performed with the associated additional inspection fees.

Mechanical Permits

The rough and pressure test of mechanical permit categories "009" Above & Below Ground Tanks/Pumps & Pollutant Storage System, "016" Pressure Process Piping and "019" Refrigeration will be combined and must be requested under the new inspection request code "106" Rough/Pressure Test.

Partial inspections, if required, will be performed with the associated additional inspection fees.

Electrical Permits

Inspection request code "074" Foundation Grounding/Underground will be utilized for electrical permits requiring foundation grounding and underground inspections.

Partial inspections, if required, will be performed with the associated additional inspection fees.

Thank you.
